LEACHATE EVAPORATOR SYSTEM (E-VAP)

WINDEMULLER
Partners in your success

Windemuller has helped with the installation of LFG Specialties' patented leachate evaporation system (E-Vap) which beneficially uses landfill gas energy to evaporate leachate. The innovative E-Vap provides integrated, long-term control of these regulated landfill by-products in one reliable and proven process. This solution offers real cost savings for liquid disposal. In addition, the E-Vap mitigates liability associated with off-site leachate transfer.

Windemuller has managed a number of leachate evaporator projects, including:

- Waters Landfill
  Waters, MI
- Northern Oaks Landfill
  Harrison, MI
- Glens Landfill
  Traverse City, MI
- Sampson County Landfill
  Roseboro, NC
- Forest Lawn Landfill
  New Buffalo, MI
